

# FABRICARE

CONCENTRATED UNIQUE PRODUCT TO CONDITION,  
SOFTEN AND STRENGTHEN ALL MAKES OF FABRIC

## BENEFITS

SUITABLE FOR ALL TYPES OF FABRICS	Fabricare is suitable for natural and synthetic materials. Many non-iron fabrics are treated with a resin e.g. Wash-n-wear and fabric softeners cannot penetrate the fibres.
SAFE	Gentle and non-irritating to the skin. Safe to use in all types of washing machines as well as for hand washing.
SPECIAL FEATURES	Because it goes INTO fabrics by penetrating the fibres and not ONTO, thereby eliminating any build up. Fibres are protected and strengthened. As fibres are separated and not knotted by the treatment, drying time is reduced. Reduces static build up.
ECONOMY FACTOR	A 500ml of concentrate will give 200 treatments.

FABRICARE GOES INTO AND NOT ONTO FABRICS

## HOW TO USE

Dilute 25ml of concentrate in a 500ml dispenser, fill with water and shake well. Pour 50ml of the diluted FABRICARE into the washing machine dispenser or add to the final rinse water. Use also when hand-washing woollens or delicate fabrics. Do not pour concentrate directly on to the garments.

## MAIN INGREDIENTS

- OPTICAL BRIGHTENERS OR FLUORESCERS FABRICARE contains the finest Optical Brightners, which replace the brightness in the washing process. This makes "whites whiter and colours brighter".
- LUBRICANTS Lubricates fibres, giving a soft feel and improved tensile strength or elasticity.
- CONDITIONERS The substantive Conditioners will not cause yellowing, or render the fibres waxy. Even after repeated use, the fabrics will retain immediate re-wetting properties, leaving the article absorbent to the washing process.
- FRAGRANCE Fresh and pleasing after diluting.
- BIODEGRADABLE Contains no waxes
- CAUTION Never use in concentrated form – it will stain.
